# **Curious About Who Has Taken Home All The Awards In The World Of 3D TV Technology?**

If you are looking in to 3D Televisions then look no further than Panasonic. The Panasonic Viera line of Televisions have received honours across the board when it comes to 3D technology. It appears like plasma technology has beaten LCDs at this stage in time and the Panasonic Viera's are the top-of-the-line plasma tv's on the market today. At E3 in 2011, their new VT 30 edition of Television destroyed its competitors and impressed testers. It's 3D technology image quality are totally spectacular and should be the best option for anybody searching for the very best 3-D TV in 2011.

One of the aspects the VT series was a little bit short on until recently was design and style. The 2011 models of VT30 Viera Plasmas on the other hand look positively wonderful and definitely do not get it wrong in the style department. They are now undoubtedly match those Televisions from Sony and Samsung and to a lot of people look better yet.

One of the standard claims to fame that Viera TVs has always been their amazing ability to produce rich and deep blacks that blow other TVs out of the water. The 2011 version of the Viera line of plasma TVs are no different. The colors look absolutely stunning and really are worth the price. The 2011 Panasonic TVs also up the game in terms of 3-D ready glasses. While the 2010 version of 3-D glasses were a bit bulky and uncomfortable, the 2011 versions are a lot more streamlined and easier to wear.

When it comes to [LCD vs Plasma](#) technology, Plasma takes the crown. LCD Televisions continue to have issues with ghosting pictures. What's ghosting? Basically it is when you can actually see the remains of earlier pictures or individual images in a 3D environment. LCD tvs have been guilty of this when compared to plasma sets. So plasma is certainly the best option.

3-d Television technology is continuously changing and getting better, so I strongly encourage you to keep updated with what brand is on top. These days it's Panasonic, but you never know moving forward. Perhaps another brand may start leading the way.

There are so many great aspects of the Panasonic Viera models of plasmas you should look at more over at [Panasonic Viera 2011](#). There you'll find intelligent, in depth info on things like [Panasonic TC-P65VT30](#). A must visit!
